

# NAVIGATE THE SEAS

**A**t The Seas with Nemo & Friends, a team of animal experts, aquarists, veterinarians and conservationists utilize their talents to care for the animals at EPCOT and help protect ocean habitats around the world.

## ACTIVITY

Use your knowledge of some of the incredible ocean animals seen in "Magic of Disney's Animal Kingdom" to complete the maze below. When you reach an image in the maze, find the corresponding icon on the right and decide which of the statements is true. Then, use the arrows as a hint to find your way to the middle.

GO THIS WAY

Corals are groups of animals that grow up to a few inches every year.

**OR**

GO THIS WAY

Corals are rocks carved by centuries of ocean currents.

GO THIS WAY

All sharks are over 15 feet and instinctively hunt large prey.

**OR**

GO THIS WAY

Some sharks are as tiny as 7 inches and prey on tiny zooplankton and krill.

GO THIS WAY

Some species of stingrays are migratory, following a pattern of moving from one area of the ocean to another during certain times of the year.

**OR**

GO THIS WAY

Stingrays can only be found in saltwater habitats.

GO THIS WAY

Seagrasses are an important source of food for sea turtles and turn the fat inside their bodies green.

**OR**

GO THIS WAY

Sea turtles stay away from seagrasses to avoid predators that could be lurking within.
