

# Coral Lab

Climate change threatens coral reefs worldwide. At the Coral Lab, *Caguaya's* scientists genetically engineer super corals that can better resist temperature swings and other threats. These hearty new super corals are then introduced to the ecosystem on man-made, storm-resistant bases within *Caguaya's* protected complex, ensuring that Jamaican coral will thrive for years to come. Coral Lab educates guests about this global crisis while empowering them to actively help rebuild the ecosystem.

Help grow *Caguaya's* reef by planting your own super coral!

Learn about the science that goes into farming super-resilient super corals!

Stay connected by adopting a coral and tracking its growth!

*Caguaya* is committed to implementing short and long-term solutions to the damaging effects of climate change. The facilities at Coral Lab and the other islands of *Caguaya* are powered using wind and tidal energy.
